A decade of NL IGF

The Netherlands has a long history of public-private partnerships and multistakeholderism. The Netherlands has been involved in Internet Governance since the beginning. Following the Tunis Agenda at the World Summit on Information Society in 2005, we have organized meetings in preparation for the IGF since 2006.

NL IGF is committed to ensuring one open, free and secure Internet

The Netherlands Internet Governance Forum (NL IGF) was officially founded in 2011. It is a consortium of multistakeholder partners, including the Ministry of Economic Affairs and Climate Policy of the Netherlands, SIDN, and ECP | Platform for the Information Society.

NL IGF vision: IGF 2025

We took 2022 as a moment to look back on over a decade of NL IGF and look forward to the renewal of the mandate of the IGF in 2025. We came together in a multistakeholder setting to create a shared vision among Dutch stakeholders for the Internet Governance Forum in 2025.

NL IGF 2022: Internet fragmentation

National NL IGF event in preparation for the IGF 2022 took place on November 21st.

Program:

- Renewal covenant between Dutch government and SIDN
- On Internet fragmentation and Internet Governance – Chris Buckridge, RIPE NCC
- “The Internet under the hood” – Cristian Hesselman, SIDN Labs
- Panel discussion on the effects of fragmentation on one open, free and secure Internet:
 - Arjan el Fassed (Google)
 - Alisa Heaver (Ministry of Economic Affairs)
 - Nathalie Jaarsma (Ministry of Foreign Affairs)
 - Cristian Hesselman (SIDN Labs)
 - Maarten Botterman (ICANN)

ECP annual conference 2022

ECP | Platform for the Information Society is one of the initiators of the NL IGF. This social change organization was founded in 1998 to provide a neutral platform for public and private stakeholders to come together and work towards an inclusive and resilient digital society.

On November 17th, ECP hosted its annual conference, this year focused on the vibe shift in the digital society.

Nearly 800 people attended this conference, from multiple stakeholder groups including politicians, government, private sector, academia, civil society organizations, and youth.

Topics discussed included cybersecurity, digital sovereignty, shared public Internet, online trust, digital inclusion, online content moderation, disinformation, hate speech, metaverse, digital currency, sustainability, quantum technology and more.

Argument map Internet shutdowns

This map shows arguments for and against blocking the websites of RT and Sputnik News. This blockade is part of a European Union regulation (2022/350) that bans broadcasting of RT and Sputnik News on all channels in the EU, including radio and TV. The arguments on this map only relate to the blockade of the websites of RT and Sputnik News, referred to on this map as 'the blockade'. The current regulation only specifies RT and Sputnik News, but at least three more Russian media organisations are expected to be added. An EU regulation enters into force immediately in all Member States. A regulation is issued by the European Commission and is enacted through a set procedure. Member States do not have to transpose it into national legislation.

This Argument Map was commissioned by the Amsterdam Internet Exchange (AMS-IX) and ECP | Platform for the Information Society and produced under the direction of *De Argumentenfabriek*. Together with a broad group of experts from companies, governments, knowledge institutions and non-governmental organisations, we collected the arguments included on this map during two thinking sessions.

IGF 2022: NRI community

Globally, a network of more than 130 national and regional Internet Governance initiatives has emerged, including [NL IGF](#) and [EuroDIG](#): the NRI community.

The Netherlands IGF is a strong national initiative, which officially came into existence in 2011, though Internet Governance meetings in the Netherlands have been organized since the first IGF in 2006.

During the IGF 2022, representatives of NL IGF participated in two NRI sessions, including:

- [IGF 2022 NRIs Main Session: Safeguarding and Strengthening the Core Principles of a Trusted Internet](#) – Nathalie Jaarsma, cyberambassador for the Kingdom of the Netherlands
- [\[NRIs\] Multistakeholder and multidisciplinary modus operandi of Internet governance: 20 years after the original WSIS where are we?](#) – Stephanie Teeuwen, co-coordinator and youth representative NL IGF

Additionally, Young NL IGF was involved in the [IGF Youth Track 2022](#).
