

Initiative Description

Conducting a scientific study on the topic "ICTs and sustainable development goals" and publishing a scientific article. The COVID-19 pandemic and its multiple impacts have once again demonstrated the importance of the ICT sector. Evidence of this can be seen in the International Telecommunication Union's Connect 2030 Agenda for the Development of Telecommunications/ICTs Worldwide, which highlights how technological advances in the next ten years will help achieve the 17 SDGs faster. "The Connect 2030 Agenda for Global Telecommunication/ICT Development aims to ensure that technological progress will accelerate the achievement of the United Nations Sustainable Development Goals (SDGs) by 2030". In the 2030 Agenda for Sustainable Development, the main thesis is that the expansion of ICT and the global interdependence of activities can accelerate human progress and close the digital divide. So we want to do some research on how Internet can positively influence achievement of each SDG through a review of specific practices.

Initiative Scope

Purpose

Conducting a scientific study on the topic "ICTs and sustainable development goals" and publishing a scientific article.

Objectives

- explore the interaction between the Internet and the SDGs;
- find patterns of the influence of the Internet on the achievement of the SDGs,
- identify the positive impact of the Internet on the achievement of the SDGs
- conduct an analysis of significant initiatives in achieving the SDGs thanks to the Internet;
- put forward general recommendations based on the analysis.

Deliverables

Presentation of the results of scientific research during an online round table on the topic «ICT and the concept of sustainability»
